General Project Information

Project Description Narratives

Purpose, Scope, and Technical Approach:

Purpose: The scope of this project is to assess and minimize the potential risks posed by each of the remaining release sites, implementing corrective actions where necessary, and to obtain approval from the regulator that no further action (NFA) is required. The work scope currently anticipated to complete this effort is included in this document. The cost of any additional work scope required as a result of unanticipated negative regulator response to requests for NFA is not included in this plan.

Scope and Technical Approach: The strategy for site remediation activities is based on: 1) reducing the real and perceived risks caused by actual or potential releases of hazardous or radioactive materials; 2) satisfying RCRA corrective action procedural requirements for sites not constituting a real or potential hazard; and 3) removing other waste materials which could inhibit the future use of ANL-E land. For sites where contamination is present in amounts high enough to represent a real or potential hazard, these objectives are met through the use of one or more of the following approaches: 1) removal and disposal of contaminated soil, groundwater and waste materials; 2) treatment of contaminated soil in place; or 3) containment of contaminated media under impermeable caps, hydraulic barriers or other engineered barriers. Other units subject to corrective actions will be dealt with by collecting sufficient data to document that remedial actions are not warranted because hazardous materials are not present in sufficient quantity to represent a hazard, or that the site is under suitable administrative control to prevent inadvertent contact with hazardous materials.

The remedial actions will proceed in a phased manner. The nature and magnitude of the planning documents produced in each step of the corrective action process will depend on the units being dealt with. Many of the units within the ANL-E program are small in size and have relatively simple problems. These sites will be completed in an expedited manner, with short simple work plans being prepared. More complex sites will require more lengthy documents.

Project Status in FY 2006:

The Argonne National Laboratory East Remedial Actions Project will be complete by the end of Fiscal Year 2003. Some minor groundwater pumping operations will be ongoing after the project is completed. Operation and maintenance of these systems is included in this project.

Post-2006 Project Scope:

Operation and maintenance to be performed by the landlord organization (SC).

Project End State

The end state will be reached at the end of FY 2003 when: (1) all releases to the environment have been cleaned up or contained in accordance with the agreed-upon cleanup approach; (2) groundwater contamination has been removed, contained, or long-term treatment or monitoring is in place; and (3) waste management structures with radioactive contamination have been decommissioned and decontaminated. Wherever economically feasible, closure will be complete, with no ongoing land use restrictions, inspection requirements, administrative controls or other ongoing requirements. Since Argonne National Laboratory-East will remain a viable institution for the foreseeable future, the land will remain under institutional control. The corrective actions for some release sites will involve containment of contaminants (as opposed to complete removal). Therefore, it is expected that

Project Description Narratives

there will be ongoing requirements (from either the IEPA or DOE) to perform maintenance and environmental monitoring to ensure the corrective actions function as designed. A description of the operation, maintenance and monitoring efforts required after physical completion of the corrective action is included as part of this project.

Cost Baseline Comments:

A revised baseline for this project was completed in March 1999. Project planning has been optimized to the extent possible. Work is planned under the premise that project team members will directly manage the work similar to a general contractor and that most subcontractor work will use existing fixed unit rate contracts. These contracts are designed to allow for rapid mobilization of subcontractors. They are also structured to minimize or eliminate procurement time to obtain subcontractor services. This contracting strategy is extremely advantageous when delays in regulator approval are experienced.

Safety & Health Hazards:

The hazards associated with the release sites being addressed by this project vary significantly. The most significant hazards are present in the Laboratory's 300 Area. Hazards in this area include both radiological and chemical contamination. While no significant hazards have been identified with regard to the environment or the public, workers will encounter occupational hazards associated with construction work as well as the potential for exposure to chemical and radioactive materials during fieldwork.

Chemical hazards are present to a much lesser degree in some of the other release sites and the anticipated corrective actions are less intrusive than those planned in the 300 Area. Thus the potential for exposure is much less. Specific hazards will vary from release site to release site. In general, the hazards associated with this project are those industrial and construction hazards common to the environmental assessment and remediation industry with special emphasis upon those sites with a radiological contamination component. The use of heavy equipment will be required on those release sites requiring physical cleanup. Workers can be expected to encounter the normal occupational and physical hazards associated with fieldwork including lifting, slipping, falling, confined spaces, and excavations. In addition, exposure to severe weather ranging from extreme cold in the winter months and extreme heat in the summer months is expected. Radiological hazards are those associated with the on-site contaminants including tritium, plutonium, fission products, and other radionuclides. The potential for significant exposure to radioactive materials in these clean-up operations is very low because the concentration of these materials is very low. Chemical hazards include those associated with both on-site contamination and the use of operational chemicals such as fuel, cleaning agents, and sample preservatives.

These hazards are managed in accordance with Federal regulations, DOE Orders and ANL-E policies and procedures. The work will be done in conformance with the ANL-E Environment, Safety and Health manual. Each specific task will be reviewed for potential health and safety concerns and, where such concerns cannot be avoided, applicable safety precautions will be put in place and enforced.

Safety & Health Work Performance:

After safety documentation has been approved as described above and work begins, workers are continuously monitored to ensure safety procedures are adhered to. Safety experts assist this project as they do any project conducted at the Laboratory. The core ESH program at the Laboratory is funded by a Laboratory overhead tax. There are no unfunded or underfunded safety and health resource requirements in this PBS.

Project Description Narratives

Two release sites that require corrective action of the 52 release sites contained in the Laboratory's RCRA Part B permit are not funded by this project per DOE Argonne Group direction. Funding to address these two release sites must be provided in order

Baseline Validation Narrative:

Technical scope and schedule validation was performed by the DOE Federal Energy Technology Center (FETC) and the Huntington District U.W. Army Corps of Engineers (USACE) (reference: Argonne National Laboratory East Baseline Validation Report, August 25 - September 2, 1998)

Project Reconciliation

Project Completion Date Changes:

Previously Projected End Date of Project: 9/1/2002

Current Projected End Date of Project: 9/30/2003

Explanation of Project Completion Date Difference (if applicable):

Reasons for changes from Paths to Closure to the ANL-E EM-40 approved March, 1999 Baseline:

(1) Added O&M cost

(2) Remaining work in the 317/319 Area is greater than planned (i.e., discovery of 317 seep and 317 groundwater plume is larger than anticipated)

(3) Added solid waste management units (SWMUs) per our regulator Illinois Environmental Protection agency (IEPA): Building 214 Sump Pump, AOC-H Contaminated Soil Near Building 24, and AOC-F Contaminated Soil Near Building 827.

Project Cost Estimates (in thousands of dollars)

Previously Estimated Lifecycle Cost (1997 - 2070, 1998 Dollars):	21,604	Actual 1997 Cost:	3,134	Actual 1998 Cost:	3,353
Previously Estimated Lifecycle Cost of Project (1999 - 2070, 1998 Dollars):	15,117	Inflation Adjustment (2.7% to convert 1998 to 1999 dollars):			408
Previously Estimated Lifecycle Cost (1999 - 2070, 1999 Dollars):	15,525

Site Summary Level: **Argonne National Laboratory - East**

HQ ID: **0002**

Project **CH-ANLERA / ANL-E Remedial Actions**

Site Need Code: CH-DD11-99

Site Need Name: Remote Characterization of In-Ground Concrete Structures

Focus Area Work Package ID: DD-10

Focus Area Work Package: Production Reactor D&D

Focus Area: DDFA

Agree with Technology Link: Y

Benefits (Cost, Risk Reduction, Both): Cost

Technologies

Cost Savings (in thousands of dollars)

Range of Estimate

Three Dimensional, Integrated Characterization and Archiving System (3D-ICAS)

2-D Linear Motion System

Mobile Automated Characterization System

CDI Remote Characterization System
